Improving lives through meaningful Innovation

Powering Today & Tomorrow:

HPL Electric's Vision for a Brighter Future

THE FUTURE OF SMART POWER

Gautam Seth

Joint Managing Director
HPL Electric & Power Ltd.

A multi-product electric equipment manufacturer with a wide range of products

PCI CABLES INDUSTRIES PVT. LTD.

Ranjeet Kumar
AVP (Sales & BD),
PCI Cables Industries
Pvt. Ltd.

Could you provide some details about the products and services your company offers?

Our company stands as one of the leading manufacturers and exporters of a comprehensive range of overhead conductors, cables, and earth wires. We take pride in being recognized as "The Ultimate Manufacturer of Cables and Conductors," offering high-quality solutions across multiple sectors. Our product portfolio includes PVC/XLPE insulated power and control cables, service cables, and aerial bunched cables with voltage ratings of up to 11 kV. Additionally, we specialize in producing a wide range of overhead conductors with voltage capacities as high as 800 kV.

Our products are extensively supplied to various state electricity boards, public sector utilities, and central government organizations across India. Furthermore, our cables and conductors have also been widely used in metro railway projects and have found application with several overseas clients. Our commitment to quality and innovation positions us as a trusted partner in delivering robust and reliable electrical infrastructure.

What sustainable practices have you implemented in the production of conductor, cables, earth wire, EPC, and turnkey projects? How important is sustainability to your business?

PCI Cables is one of the few Manufacturer in India who had manufactured and supplied 91 Strands Conductor. Sustainability is a core aspect of our business, and we have taken significant steps to ensure our operations are environmentally responsible. Over the past two years, we have made great strides in the development and supply of high-efficiency conductors. Notably, we introduced high ampacity conductors such as AL-59, ECO Conductors, and BEC (Steel) Conductors, which are designed to improve energy transmission efficiency while reducing environmental impact. Our ongoing commitment to innovation extends to our future plans, with the introduction of MVCC (Medium Voltage Covered Conductors) and HTLS (High Temperature Low Sag) conductors slated for the next financial year.

How have market demands for different types of cables and conductors changed over the past few years?

The market landscape for cables and conductors has evolved significantly in recent years, with a surge in demand driven by large-scale infrastructure projects. In particular, the Tariff based Competitive bidding (TBCB) , Revamped Distribution Sector Scheme (RDSS) , Renewable energy and Railway have seen substantial demand. This increase in demand is reflected in our order books. In September 2024, we received an order valued at approximately Rs. 44 crores for railway electrification from Rail Vikas Nigam Limited. Additionally, we secured an export order worth around USD 4 million for projects in Guinea and Liberia, marking a significant achievement in our international business expansion.

Looking ahead, we have already booked orders amounting to approximately Rs. 50 crores for the 2025-26 financial year, reflecting the sustained growth in the sector. Our turnover for the financial year 2022-23 was approximately Rs. 127 crores, rising to Rs.165 crores in 2023-24. In just the first half of the 2024-25 financial year (April to September 2024), we have achieved a turnover of Rs. 119 crores, and we expect to close the year with an estimated turnover of Rs. 250 crores.

As an A.V.P (Sales & Business Development), how do you ensure a balance between operational efficiency and maintaining high-quality standards in production?

As the Associate Vice President (Sales & Business Development), I believe that maintaining a balance between operational efficiency and upholding high-quality standards is essential for sustaining long-term business success. To meet the growing demands of the market, we have embraced cutting-edge technologies in cable and conductor production. This includes the development of advanced products such as MVCC (Medium Voltage Covered Conductor), ECO Conductors, AL-59, and HTLS (High Temperature Low Sag) conductors. These innovations enable us to not only cater to current market needs but also anticipate future trends in energy transmission.

In addition, we are actively pursuing a listing on the Bombay Stock Exchange (BSE) within the next 6-8 months, which will further strengthen our operational capabilities and financial growth. We are also working on ambitious expansion plans, including setting up our own Properzi mill and galvanizing plant by the next financial year. These initiatives will enable us to streamline our production processes, enhance quality control, and reduce lead times, helping us achieve our goal of becoming one of the top ten manufacturers in the cable and conductor industry within the next 5-7 financial years.
